Preface

This *Stenospeed Shorthand Dictionary* contains more than 25,000 words with their *Stenospeed* forms. The listing includes not only all words commonly used in general business or other activities but also many specialized technical, scientific, medical, and legal words.

The shorthand forms are based on the rules presented in *Stenospeed Shorthand*. The experienced *Stenospeed* writer will usually have no difficulty in selecting or using the best and shortest outline for most words. However, for new words or for longer, more difficult words, this dictionary is a guide for an appropriate outline.

The outlines are written phonetically using the preferred pronunciation given in Webster's Third New International Dictionary and Webster's New Collegiate Dictionary, Eighth Edition. There are occasional confusing situations encountered in any phonetic system. As an example, the sound of *z* in many words, including some plural forms with *s*, should be written with *z* for phonetic purity but are more readable in transcription if they are written with *s*. Another example is the sound of *cher* in the group of words that includes *nature*, *feature*, and so on. *Stenospeed chay-r* is the closest expression of the sound, but *t-r* is more quickly written and more readily transcribed. Each individual should write the variation which he reads most easily.

Both the secretary and student will find that occasionally reviewing short sections of the dictionary will keep their *Stenospeed* knowledge fresh and their shorthand at maximum speed.
